**WARNING**

Contact an authorized service technician or certified HVAC contractor for installation, repair, maintenance, and/or re-installation of this unit.

Adhere to this installation manual.

Incorrect installation may lead to electric shock or fire.

Do not uninstall the unit randomly. Install per following instructions only.

**NOTE**

1. Do not install the unit in a place vulnerable to leakage of flammable gases. If flammable gases are leaked and left around the wired controller, fire may occur.
2. Do not operate with wet hands or let water enter the wired controller. Otherwise, electric shock may occur.
3. The wiring should adapt to the wired controller current. Otherwise, electric leakage or heating may occur and result in fire.
4. The specified cables shall be applied in the wiring. No external forces should be applied to the terminals. Cut or frayed wires could cause heating to occur and result in fire.
2. INSTALLATION ACCESSORY

Select the installation location

Do not install in an environment near heavy oil, vapor or sulfureted gas. Doing so will cause product deformation and lead to system malfunction.

2. INSTALLATION ACCESSORY

Wired controller installation precautions

1. This manual provides the installation method of the wired controller. Refer to the wiring diagram of this installation manual to wire the wired controller with indoor unit.
2. The wired controller operates within a low voltage loop circuit. Do not connect to any 220V (commercial electricity) or 380V (high voltage) service. Do not wire the aforementioned voltages into this unit’s circuit.
3. The Shielded wire of the wired controller must be reliably grounded.
4. The connective cable of the wired controller should not be longer than 65 ft (20 m).
3. INSTALLATION METHOD

1. Wired controller dimensions:

- Wired Controller
- 5-Core Shield Cable, the length is decided by installation
- Wire Joint, 5p
- Infrared Pipe
- +5V
- Indoor Unit Switch Board
- Indoor Unit
- RUN
- GND
3. Wiring connections

- Connect the female joint of wire group from the main board with the male joint of connective wire group. (See Fig.3-3)
- Please connect the other side of connective wire group with the male joint of wired controller’s wire group. (See Fig.3-3)

4. Remove the upper part of wired controller

- Insert a slot screwdriver into the slots in the lower part of the wired controller (2 places) and remove the upper part of the wired controller. (Fig.3-4)

NOTICE
The PCB is mounted in the upper part of the wired controller. Be careful not to damage the board with the screwdriver.
3. INSTALLATION METHOD

4. Fasten the back plate of the wired controller (continued)

- For exposed mounting, fasten the back plate on the wall with the 3 screws (M4×20) and plugs. (Fig.3-5)

- For flush-mounting, fasten the back plate on the switch box with 2 screws (M4×25) and fasten it on the wall with 1 screw (M4×20). (Fig.3-6)

NOTICE
Put on a flat surface. Be careful not to distort the back plate of the wired controller by overtightening the mounting screws.
3. INSTALLATION METHOD

5. Wiring

A. For exposed mounting, there are four different mounting positions. There are three that need cutting.

B. Shielded wiring

CAUTION

Do not let water enter into the wired controller. Use trap and tape to seal the connectors and wiring. (Fig.3-9)

When installing, leave an additional length of wire to allow for removal or maintenance of the wired controller.
3. INSTALLATION METHOD

6. Reattach the upper part of the wired controller

- After adjusting the upper case and then closing the upper case; avoid pinching the wiring. (Fig 3-10)
